Powerteam Miniseries

Short Name	Long Name	Length (Minutes)
SF1	The Super Family's 1st Movie	112

Processes

Denoise and scene detect } takes a very long time
put on TREASURE-CHEST

Intro Cinematic (cut to best scenes with Larger Than Life playing in the background), approx. 30 seconds.

Testing 5 minutes of 60fps 640x480 HEVC, unmodified, and the same, denoised with default settings in After Effects. Takes an extremely long time to process. May be best to hold off until after TREASURE-CHEST is recommissioned on ESXi.

Clips organized in /Footage
Import into Premiere first?
- then scene detect

No difference in filesize between
60 fps 480p60 noise/no noise
Try 30 fps?

These files aren't going anywhere.

Trying to scene detect in premiere
but it's choking on these multi-hour
clips. Gets to about 25% and
hangs, then dumps its memory.

Wow, it really sucks unless it's
working directly with degraded
footage. I might not be able to
do anything until after I can
put my RAID controller in.

Source — 720x480 (0.9) @ 60i

Destination — 640x480 @ 30p ?

The quality was horrid for both of them, and the graininess wasn't even removed. It looks really good at 60i. Guess I'm going to have to stick with that. Come to think of it, I don't even know where the exported .mp4s for the Super Family even are.
